

all drawn cells are IMPLEMENTED in build_network.py
(edges read back from the compiled network)

Deng et al./Neurose 2023 Table A6 (cont. hindlimb SNS) - reference values:
 IC->IN 2.75 us exc | IN->HC 2.75 us inh (RG+PF mutual inhibition IS LAMINATED through dedicated INs; no direct HC->HC synapses, no mutual excitation)
 RGHC->PHFC 0.10 us exc | PF->NM 1.5-4.9 us exc (per joint)
 PF->IA 0.50 us exc (phase gate) | IA->NM 0.50 us inh | IA->IC 0.5 inh
 NM->IC 0.5 us inh | IC->NM 0.5 us inh | IC->IA 0.5 us inh
 IB->NM 0.59 us EXCITATORY (positive force feedback) | PF->IB 2.0 us shunt
 NM->muscle: act = $1/(1+\exp(s(x-V)))$ y=0, s=0.153, x0=-70 mV (Fig.6B)
 feedback: MuJoCo muscle TENSION formed as IA and IB input (no II)
