

(D) Commissural pathways and contralateral heel input

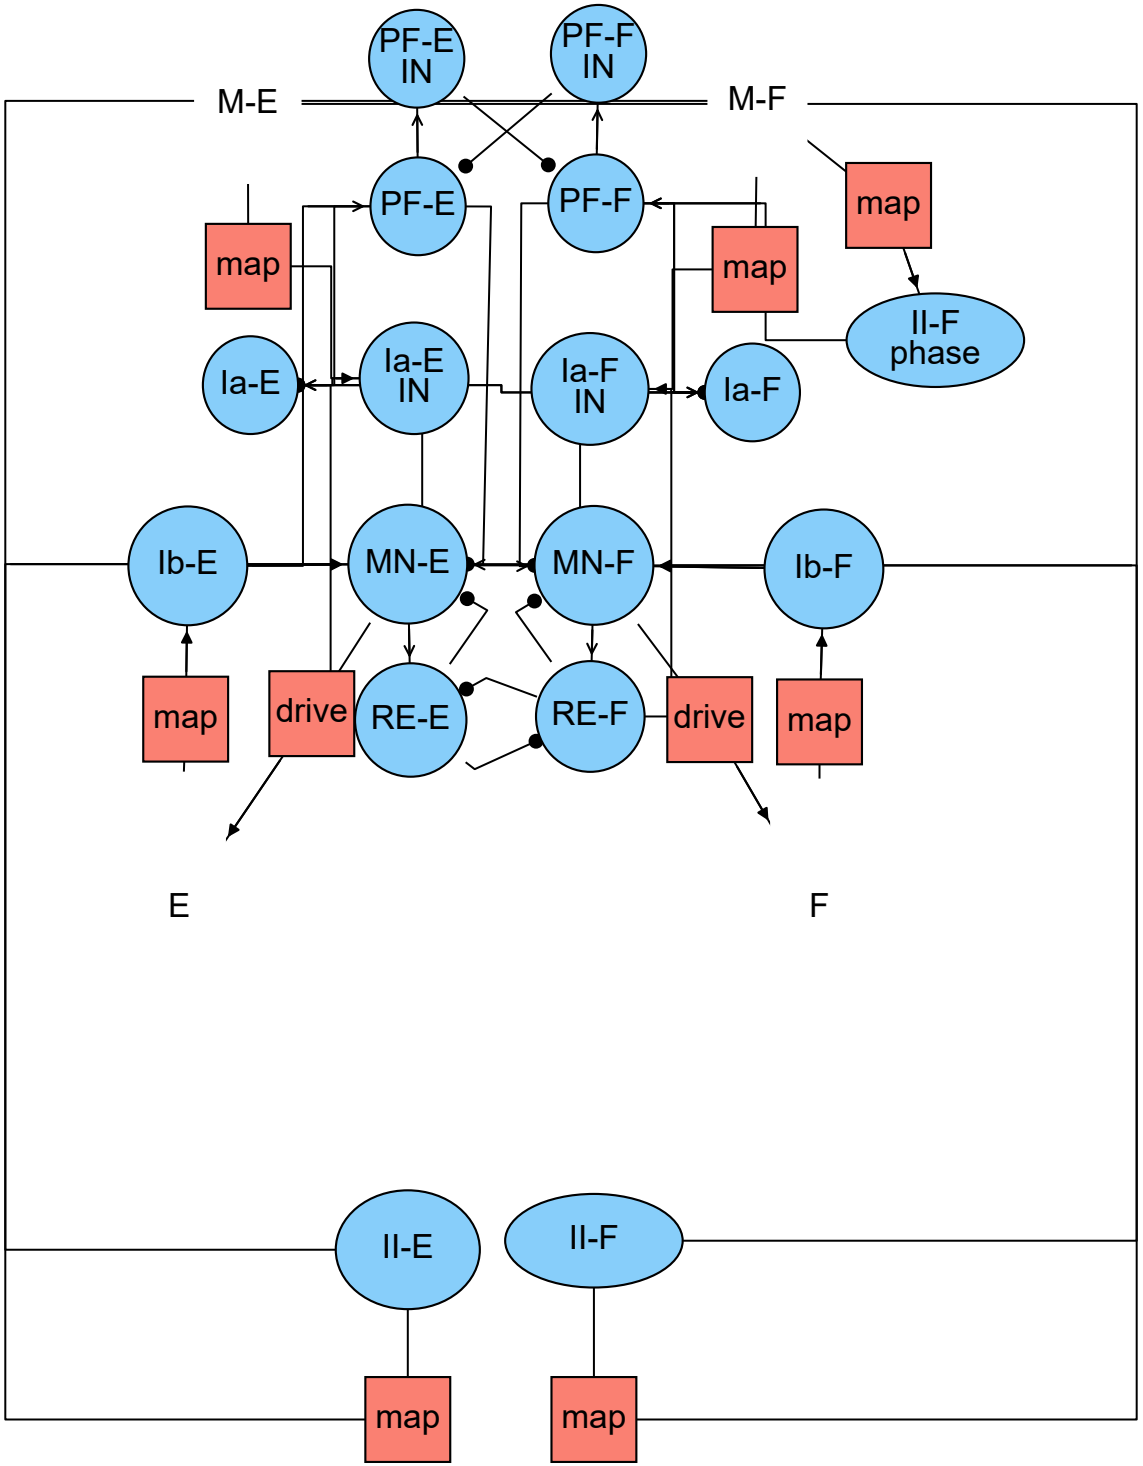

(E) Heel/toe contact subnetwork (left shown; right counterpart retained)

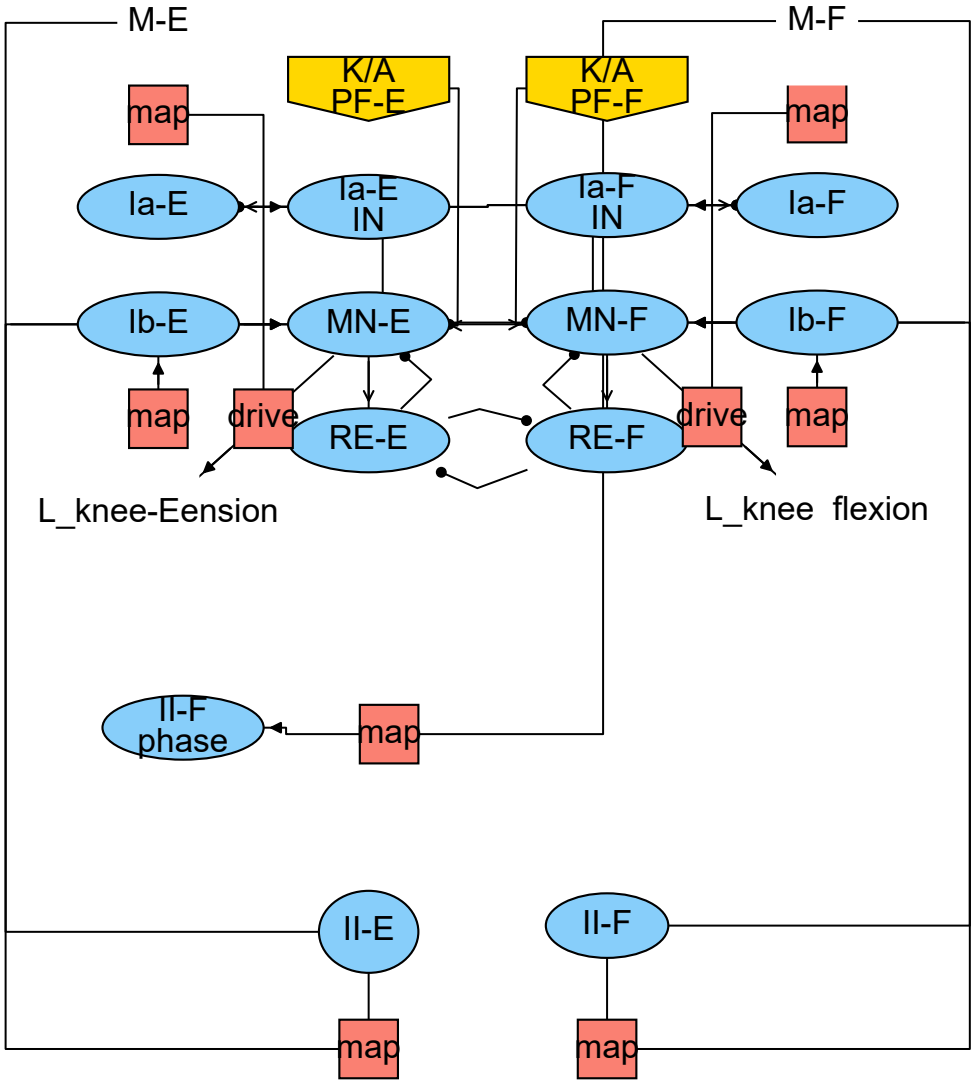

Retained phase-II (L/R): hip-F II → hip PF-F and RG-F; knee-F II → K/A PF-F and RG-F.

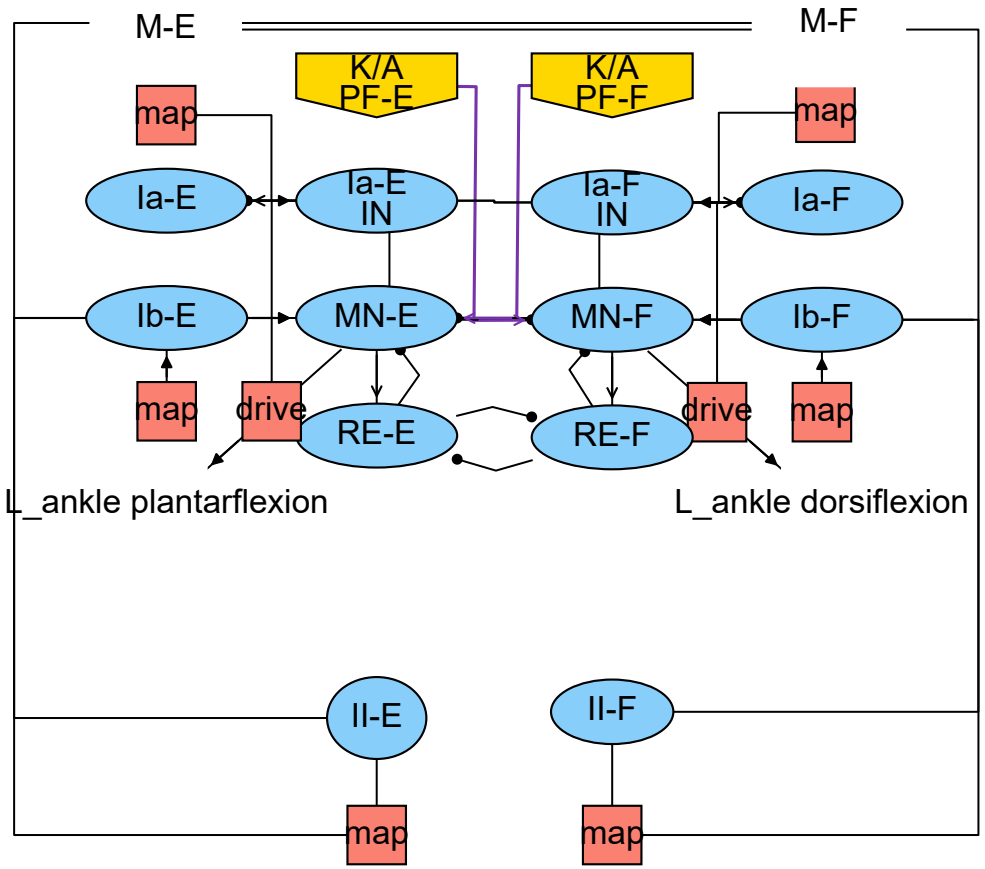

Expanded left hip: PF, MN, Ia/Ib, Renshaw, and separate II-E/F relays

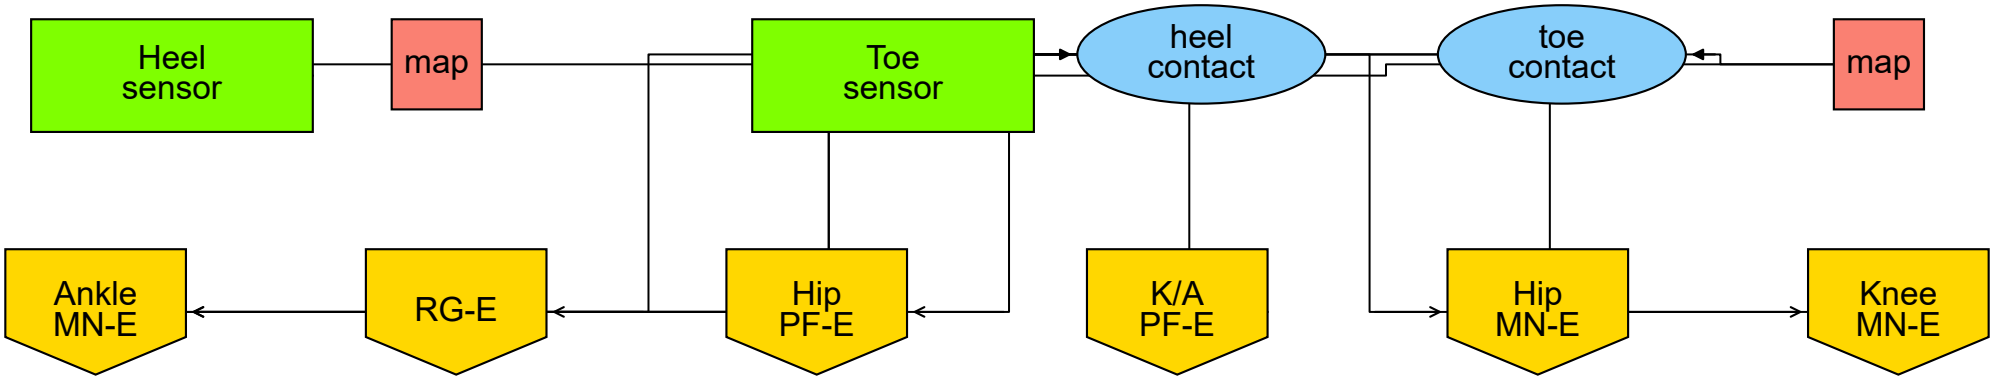

(A) Left knee: inherited MN/reflex subsystem

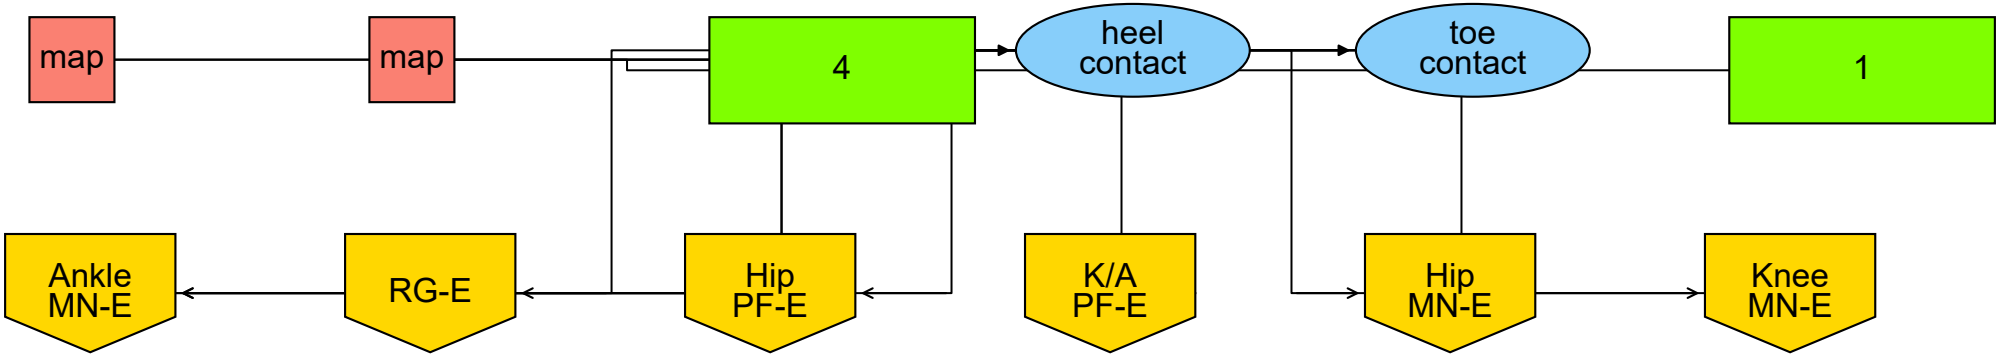

(B) Left ankle: executed PF target overlay

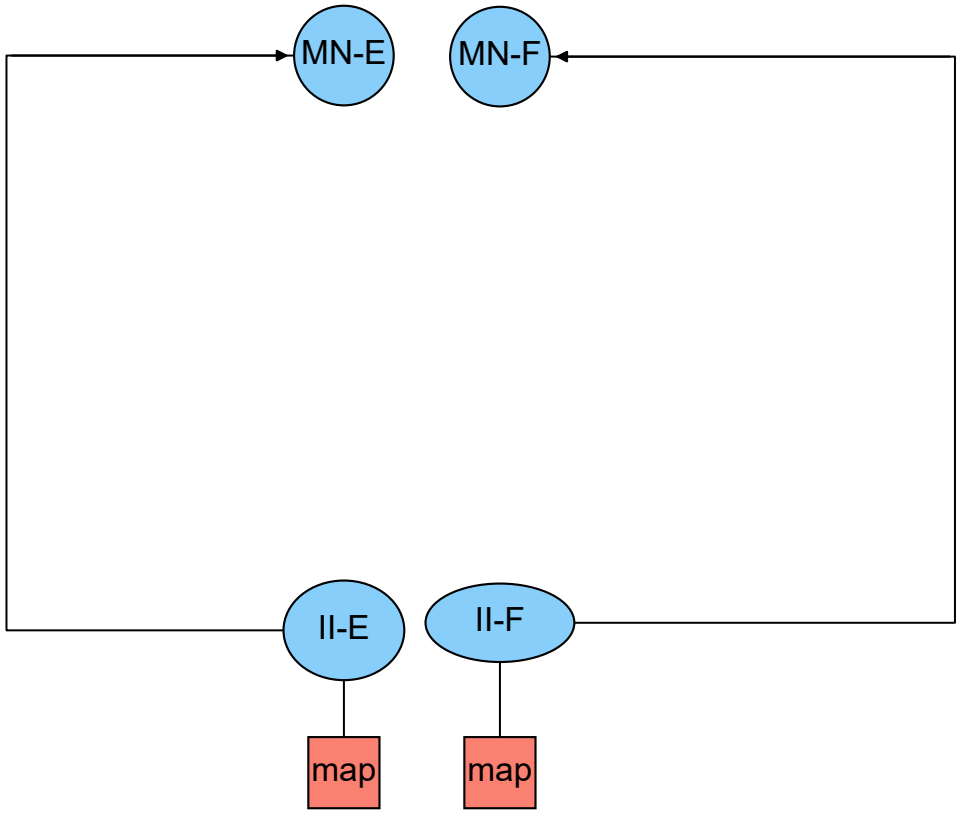

(A) Left heel/toe contact conversion and ipsilateral targets

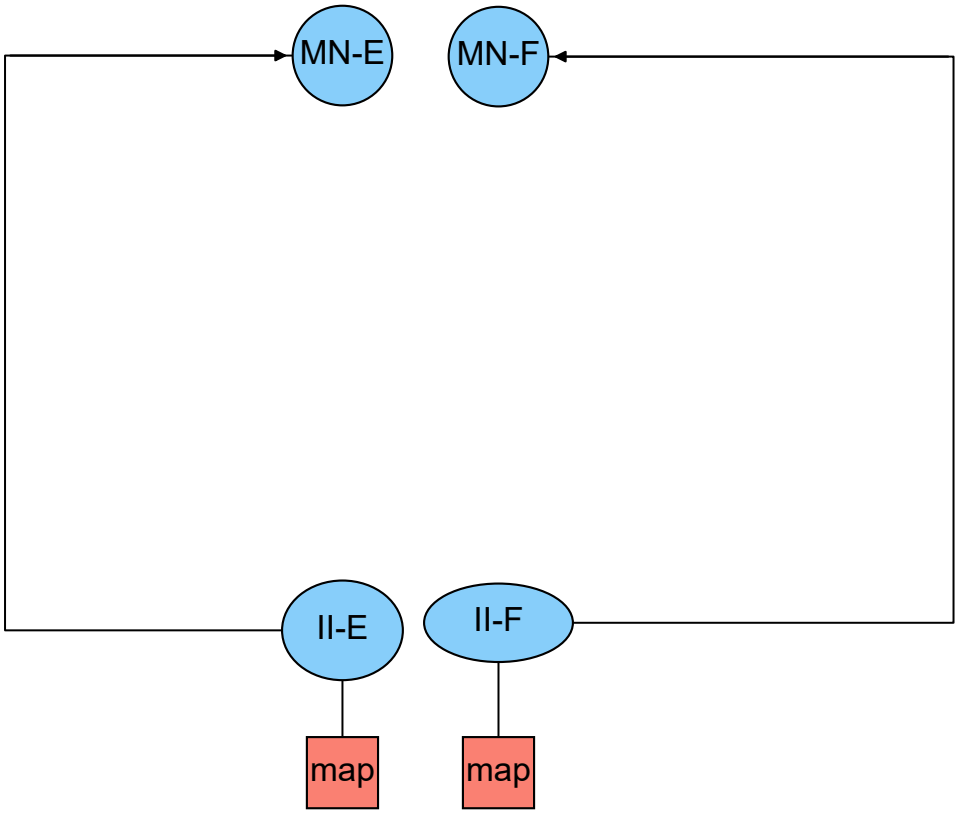

(B) Right heel/toe contact conversion and ipsilateral targets

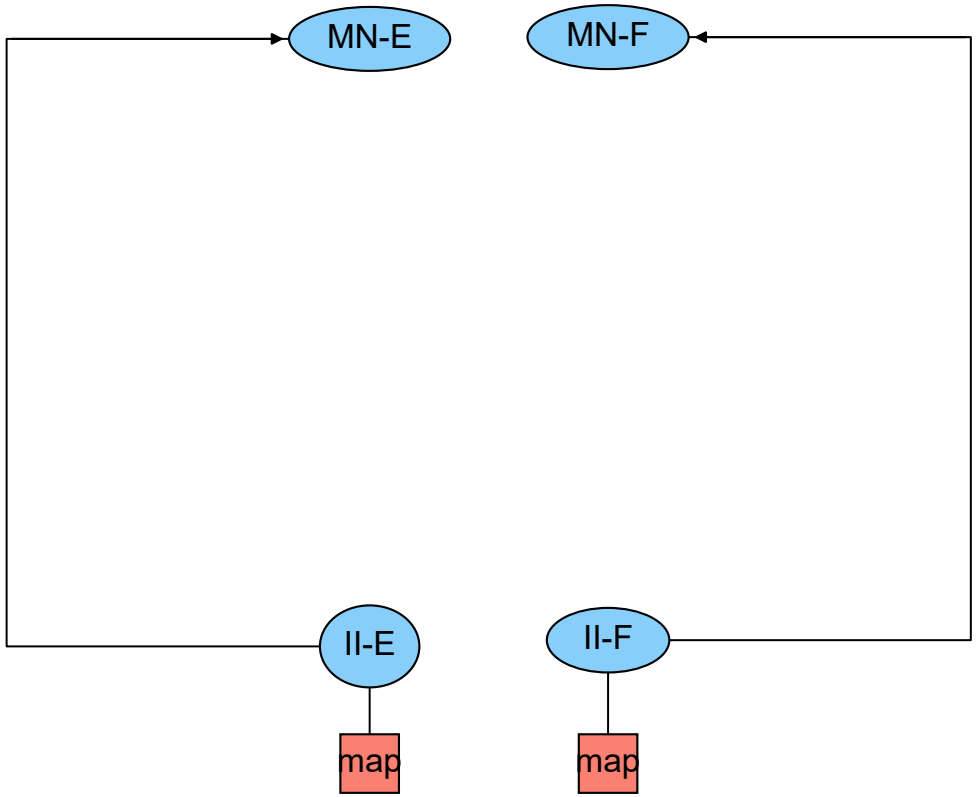

(L) hip II-E and II-F to homonymous MN

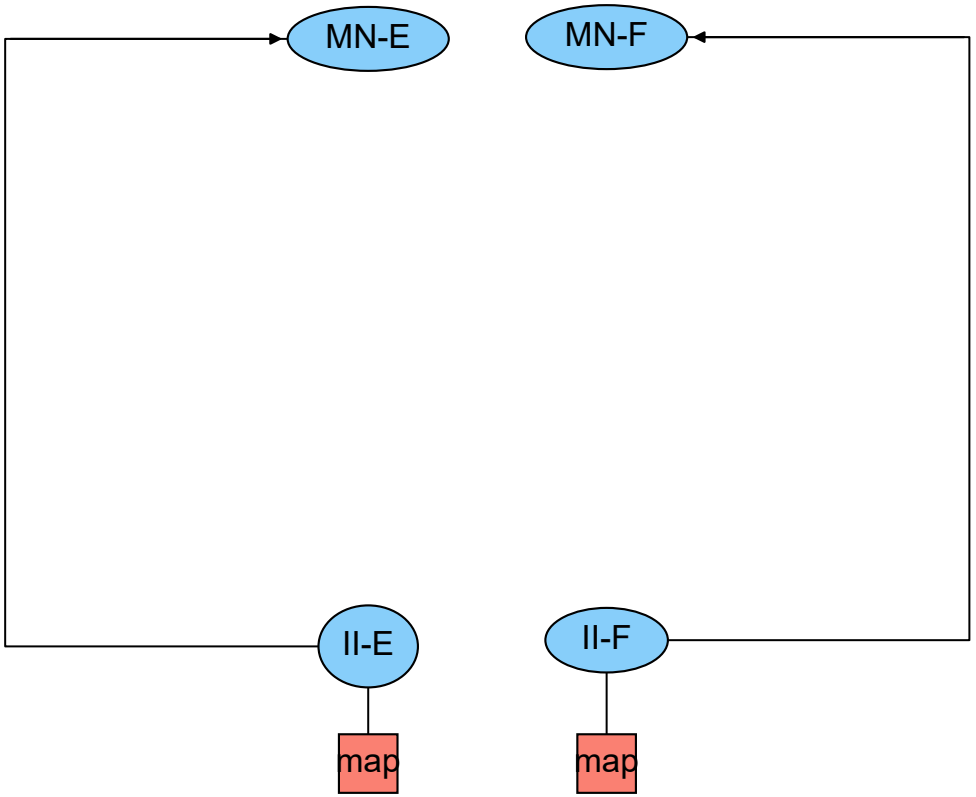

(R) hip II-E and II-F to homonymous MN

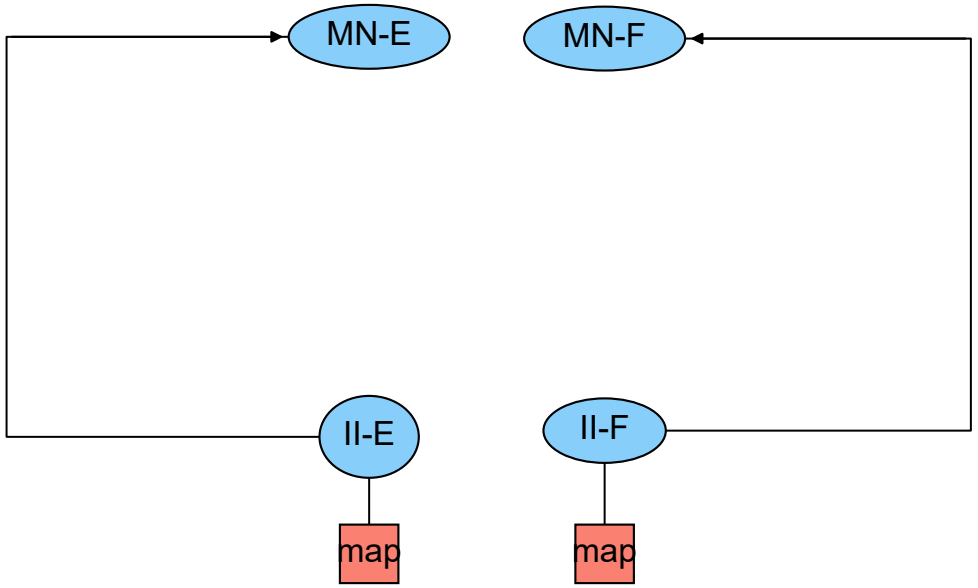

(L) knee II-E and II-F to homonymous MN

(R) knee II-E and II-F to homonymous MN

(L) ankle II-E and II-F to homonymous MN

(R) ankle II-E and II-F to homonymous MN
