Submission audit: pending only

v6 | 30 October 2026 | Five groups | Current ProofFinal source anchors

Resolved and rejected items are removed. Yellow marks work or decisions still pending. Earlier audit versions are preserved.

1. Original air-test and platform-drop recording

The short native AnimatLab plot is the later instrumented model. The original shared-RG air-stepping antagonist/frequency record and a verified platform-drop response remain unavailable. The saved stimulus is horizontal, not a timed drop.

Dissertation §6.1, 60-sns.tex:8-31; Appendix D, 95-AppendixD.tex:27.

2. Select the new pathway diagram before insertion

A source-verified right-knee pathway preview now uses the newer SNS-Simscape symbol style and current network connections. It remains separate from the manuscript under your show-first decision.

Dissertation §6.4.2, 60-sns.tex:112; output/pdf/Gait2392_Neural_Pathways_Preview_20261030.pdf.

3. Mark contributions and confirm the torque author list

The publication note now scopes the published Morrow et al. (2020) lumbosacral summary separately from the manuscript in preparation. Fill the blank contribution workbook for the three published authors. The seven-name dissertation manuscript list versus four-name paper list still needs your author decision.

Chapter 4 note, 30-torque.tex:5; legacy summary §4.1.5, :340-346; paper Main.tex:49,70. Workbook: output/xlsx/Morrow_2020_Contributions_For_Ben.xlsx.

4. Paper identification-settings table: decision pending

Proposed: replace the long settings paragraph with two rows, one per identification stage. Preserve test memberships, bounds, solver settings, and the shared-stiffness constraint. This changes presentation only; no optimization or FVU work.

Companion paper §2.8, Main.tex:383. No table inserted.

5. Paper abstract: explicit flexor/extensor wording ready

Suggested sentence: "At the measured configurations, the redesigned knee flexor and extensor routes met or exceeded the torque magnitudes of their selected human-muscle references." This identifies the two routes explicitly instead of relying on "both."

Companion paper abstract, Main.tex:82; measured results §4.3.2, Main.tex:603. No abstract edit while the colleague is reviewing.

The separate Leo Micklem review remains a proposal ledger; its 43 threads and 44 messages are not blanket-approved edits. No Overleaf upload occurred in this pass.
