

spiking LIF cell (real mV: rest -70, thr -50)

non-spiking analog cell (0.5 mV frame)

white triangle = excitatory synapse solid dot = inhibitory wire color = source family (blue extensor / vermillion flexor / green exc / purple inh / sky descending); dashed = graded (analog-source) synapse, solid from spike sources

SPIKING MIRROR of the gait2392 spinal network (build_network_spiking.py, 2026-10-02 campaign). Structure-driven: net built at the topology-gate TUNED config (all conditional pathways on, full_rules=1, phase PF); every edge class read from the compiled SNS object (8356 synapses, 896 neurons, 782 spiking) and asserted drawn. Weights calibrated by calibrate_spiking.py -> spiking_calibration.json (spike->MN mean-conductance; spike->spiking rate-calibrated). Knee columns representative; the full per-muscle wiring is editor template 'spiking_mirror' (988 nodes / 8448 edges).
