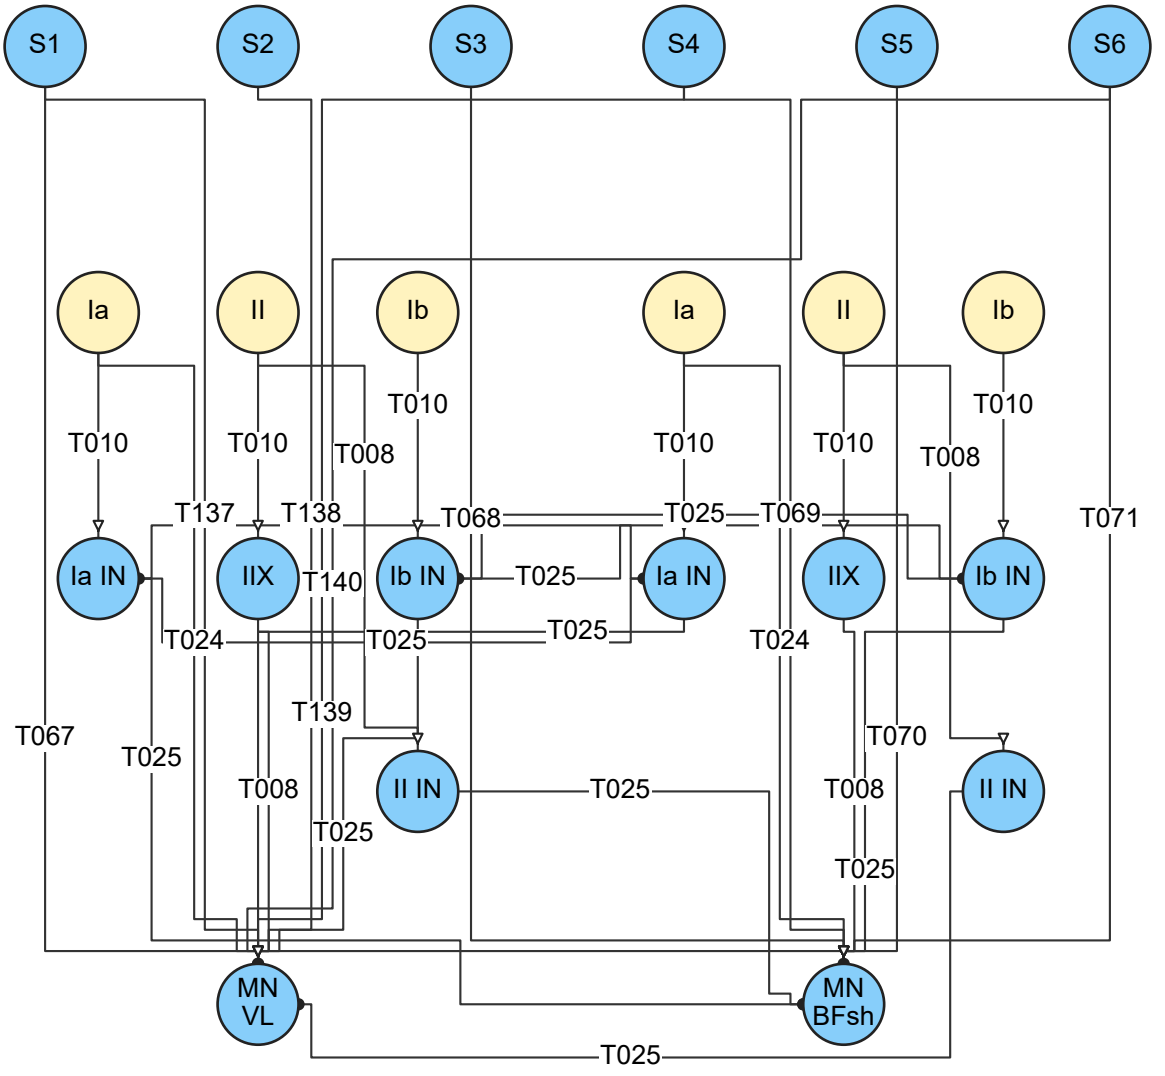
syn6: left knee motor / reflex subsystem



Actual induced vastus-lateralis / biceps-femoris-short-head circuit. PF sources are shown at top; other muscles' antagonist-IN and group load-sharing boundary paths remain in the complete graph.
22 actual cells, 31 active induced chemical pairs.

All cells shown are graded. Open triangle: excitatory type; filled circle: inhibitory.
Exact fields and omitted boundary inputs remain in the graph ledger. Current = g(Erev − Vpost).
