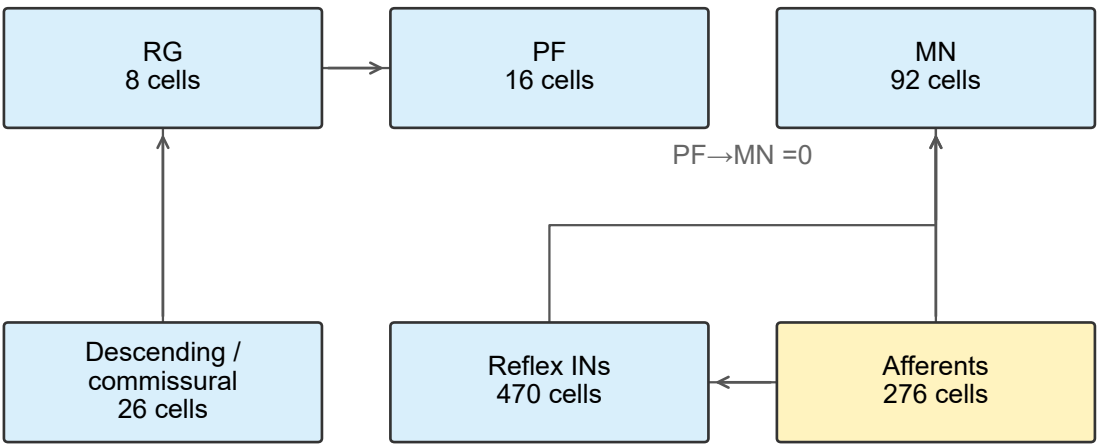
w2lvar: actual graded standing candidate



888 graded cells; 382 external-current inputs
7570 active chemical pairs; 296 zero-conductance defined pairs
92 MNs; 86 force-active muscle routes; 6 force-pruned routes

PF→MN multiplier 0; IBEXC→MN 0; standing POST_ bias ×0.83333333. Antagonist IIIN gains use the saved source-fanin mean-pool normalization.

Selected hierarchy arrows only. All actual connections, full numeric fields, candidate flags, and physical input/output policies are preserved in editable exports. Standing only; no spiking or walking claim.
