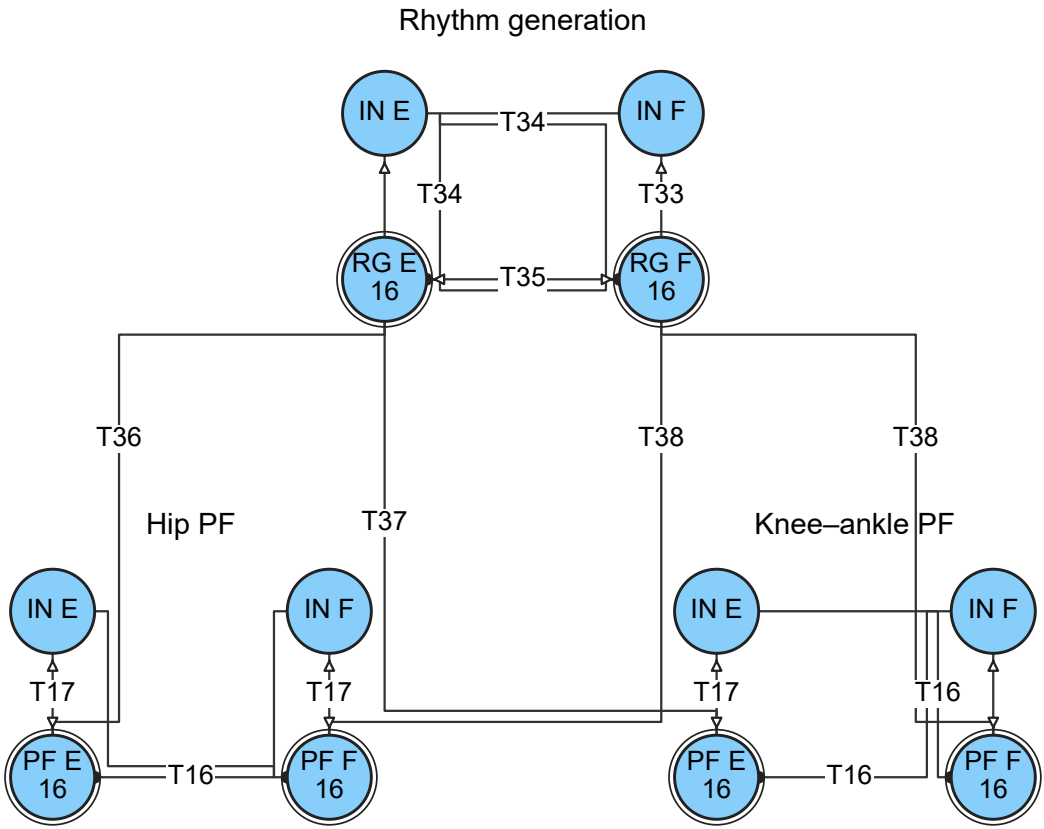
(B) Left rhythm and pattern-formation subnetworks



Actual induced circuit: 6 populations ×16 Ca/LIF cells, plus6 graded inhibitory interneurons.
Knee PF also supplies ankle MNs; it is not a separate ankle PF. External afferent/commissural routes remain in the full216-pathway graph.

Double ring: spiking population (cell count shown). Open triangle: excitatory type; filled circle: inhibitory. Current = g(Erev − Vpost).
