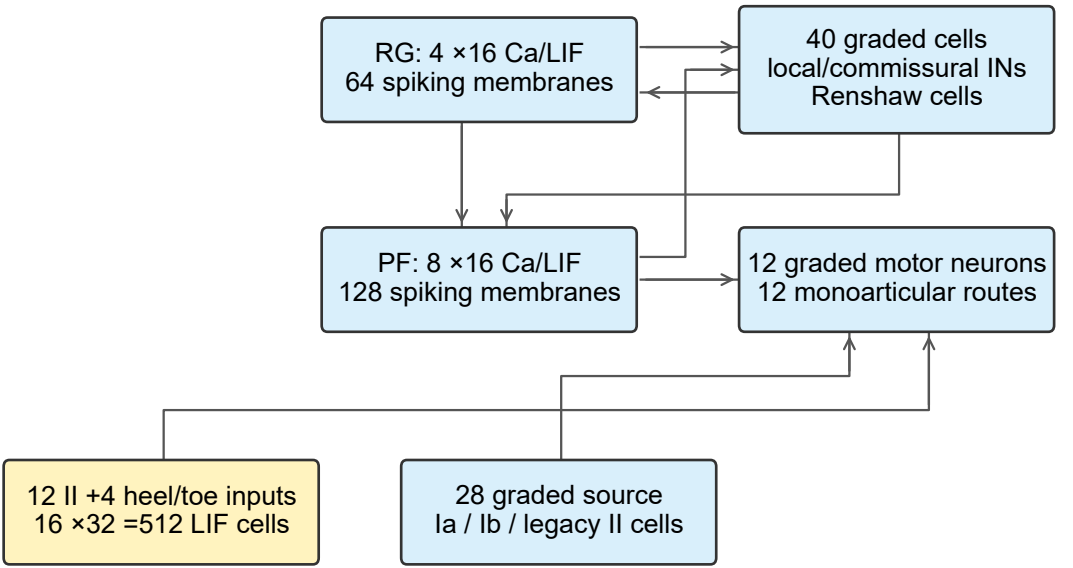
(A) W2L controller: 704 spiking and 80 graded membranes



Inputs: length-related outputs, tendon tension (N), heel/toe contact (0/1).
Output: MN mV → V → source LinearHill muscle tension (N).
Actual GRF/support are recorded; no added GRF-to-balance pathway.

Layer overview; selected arrows only. All 216 chemical pathways and 44 physical input adapters remain in the editable graph and ledger.
