Diagram language: circle + graded waveform = non-spiking neuron; spindle = Ia afferent; capsule "Ib" = Golgi tendon; pentagon = activation; striated fusiform = muscle/BPA. Connection markers: solid black circle = INHIBITORY (Esyn < 0), open triangle = EXCITATORY (Esyn >= 0). Tints: Okabe-Ito (colorblind-safe).

SNS knee reflex demo: non-spiking RC neurons + E/I synapses + antagonist BPAs on a 1-DOF knee model
