Submission audit: pending only

v7 | 31 October 2026 | Four groups | Dissertation only

Resolved and rejected items are removed. Yellow marks work or decisions still pending. Earlier audit versions are preserved.

1. Replacement neural diagram

Ben is preparing a different drawing. Both agent proposals are rejected and must not be inserted.

Chapter 6; user-owned input.

2. Original AnimatLab recording evidence

Ben is working on antagonist/frequency and platform-drop material. The incoming later-trial plots do not by themselves close that original-record request.

Chapter 6 and Appendix D.

3. Leo S05 and S09: remaining examples

Monthly-watch terms, ordered curation, a real Grillner navigation example, and the personal speed/quality basis are now explicit. Historical manual-search terms and a genuine AI-triage example remain unavailable; no protocol or example was invented.

50-database.tex:27,71.

4. Incoming W2L result identity check

The new handoff distinguishes actual108 from older96 results. Review those configuration-specific results before replacing existing numerical comparisons. Routing extraction confirms inherited attachment/via locations; transmission and sizes are distinct changes.

SESSION1_HANDOFF_20261031.md; KompareXXVII/REPORT.md.

All 44 Leo messages are individually accounted for in the consolidated ledger. Completed and rejected items are removed here. Contributions are closed. The paper remains parked. No Overleaf upload or commit.
