Submission audit: pending only

v8 | 31 October 2026 | Five groups | Review through 9:07 pm Pacific

Resolved and rejected items are removed. Yellow marks work or decisions still pending. Earlier audit versions are preserved.

1. Replacement neural diagram

Ben is preparing a different drawing. Both agent proposals are rejected and must not be inserted.

Chapter 6; user-owned input.

2. Original AnimatLab recording evidence

Ben is working on antagonist/frequency and platform-drop material. The incoming later-trial plots do not by themselves close that original-record request.

Chapter 6 and Appendix D.

3. Leo S05 and S09: remaining examples

Monthly-watch terms, ordered curation, a real Grillner navigation example, and the personal speed/quality basis are now explicit. Historical manual-search terms and a genuine AI-triage example remain unavailable; no protocol or example was invented.

50-database.tex:27,71.

4. Incoming W2L result identity check

The new handoff distinguishes actual108 from older96 results. Review those configuration-specific results before replacing existing numerical comparisons. Routing extraction confirms inherited attachment/via locations; transmission and sizes are distinct changes.

SESSION1_HANDOFF_20261031.md; KompareXXVII/REPORT.md.

5. Abstract and background: author review; frozen

Ben requested no further changes. Earlier source versions are preserved for comparison. No automatic restoration or upload. The local abstract and the live Overleaf abstract differ.

02-abstract.tex; 15-background.tex.

All 58 Leo messages across 57 threads, including 14 later Chapter 6 comments, are individually accounted for in the consolidated ledger. Completed and rejected items are removed here. Contributions are closed. The paper remains parked. No Overleaf upload or commit.
