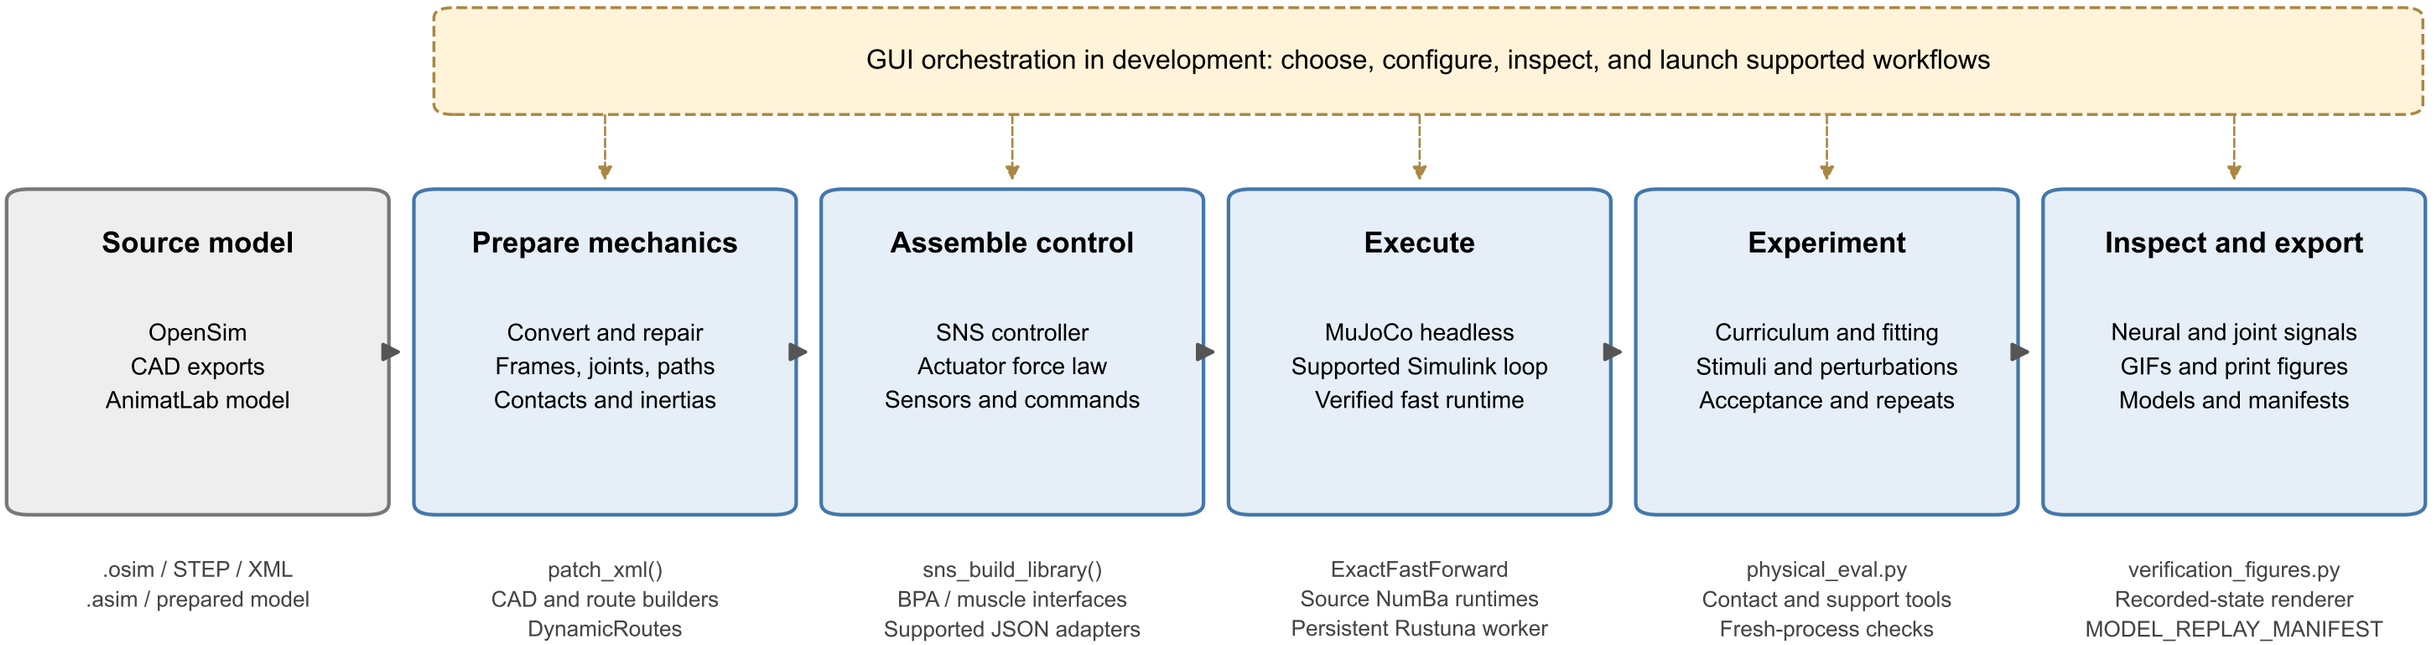
A reusable neuromechanical experimentation workflow

Project-developed models, repairs, interfaces, actuator integrations, and experiment tools



Existing foundations

OpenSim, MyoConverter, MuJoCo, SNS-Toolbox, MATLAB, Simulink, Simscape, and the MathWorks bridge

The Simulink bridge couples supported commands and sensors. Mechanical import routes are model-specific, with explicit validation.

Solid blue: implemented project components. Dashed gold: proposed frontend orchestration. Exact scripts and evidence are in the inventory.
