

KneeReflexCircuit — runnable 1:1 circuit view of KneeReflexDemo (identical blocks, values, wiring)

SNS knee reflex demo: non-spiking RC neurons + E/I synapses + antagonist BPAs on a 1-DOF knee model

Diagram language: circle + graded waveform = non-spiking neuron; spindle = Ia afferent; capsule "Ib" = Golgi tendon; pentagon = activation; striated fusiform = muscle/BPA. Connection markers: solid black circle = INHIBITORY ($E_{syn} < 0$), open triangle = EXCITATORY ($E_{syn} \geq 0$). Tints: Okabe-Ito (colorblind-safe).
